FIYTA

Driving the design of stylish smart watches with Lenovo smarter infrastructure solutions.

Solution components Hardware

- Lenovo ThinkSystem SR650
- Lenovo ThinkSystem DM3000H Unified Hybrid Storage Array

Services

- Lenovo Asset Recovery Services
- Lenovo Design Services
- Lenovo On-site Services – Deployment
- Lenovo Post Warranty Services

Established in 1987, FIYTA is a leading luxury watchmaker based in the heart of Shenzhen, China's global technology hub. With consumer demand for IoT-enabled devices growing, FIYTA looked to launch a new range of smart watches. To support innovation and bring a new generation of products to markets, FIYTA modernized its IT infrastructure, replacing geographically dispersed server and storage systems with a central platform based on Lenovo ThinkSystem SR650 servers and a Lenovo ThinkSystem DM3000H Unified Hybrid Storage Array. With the Lenovo solutions, FIYTA has an IT platform fit for the future that delivers high performance and is easier to manage. Crucially, with a stable, secure file-sharing platform, employees can share large design files efficiently and securely, fostering innovation.

“

“The Lenovo ThinkSystem solutions stood apart from vendors' offerings due to their high performance, simplicity, and reliability. Knowing that Lenovo has a local presence in China was an added plus, giving us confidence that if ever we experience any issues, we will get support fast.”
