# Jining No.1 People's Hospital

Ensuring high-quality clinical care with an IT architecture that complies with national medical data standards.

## Solution components

### Hardware

- Lenovo ThinkAgile HX5520
- Lenovo ThinkSystem SR860
- Lenovo DM5000H Storage
- Lenovo DF1200 Storage
- Lenovo NE10032 RackSwitch

### Software

- Nutanix Enterprise Cloud
- VMware vSphere

### Services

- Lenovo Assessment Services
- Lenovo Design Services
- Proof of Concept Lab
- Lenovo On-Site Services – Deployment
- Lenovo Migration Services
- Lenovo Training Services
- Post Warranty Services

Jining No.1 People's Hospital is a public hospital in Shandong Province, China with 4,200 beds, providing care for more than 3.3 million emergency and outpatients each year. To comply with national standards for the storage and exchange of medical data, the hospital replaced its existing virtualized environment with a hyperconverged infrastructure based on 12 Lenovo ThinkAgile HX5520 appliances and Lenovo DF1200 Storage to support its hospital information system (HIS), picture archiving and communication system (PACS), and other key business applications. Impressed with the stability and reliability of the Lenovo solutions, the hospital also selected Lenovo to support its new SPD (Supply, Processing, Distribution) medical equipment management system with a complete solution built on four Lenovo ThinkAgile HX5500 appliances, along with two Lenovo ThinkSystem SR850 servers and two Lenovo DM5000H storage arrays. Lenovo provided comprehensive design, installation, migration, and training services, and provides ongoing consulting and technical support.

“Thanks to the Lenovo ThinkAgile HX and ThinkSystem solutions, Jining No.1 People's Hospital was one of the first hospitals in Shandong Province to complete the construction of an SPD [Supply, Processing, Distribution] medical equipment management system. Lenovo help us redesign our IT architecture to ensure compliance, so that we can provide patients with an exceptional standard of clinical care.”

Wang Xinli, Director of Information Center, Jining No.1 People's Hospital
