TmaxData

Teaming up with Lenovo to offer customers an all-in-one database appliance.

Solution components Hardware

- Lenovo ThinkSystem SR650

Software

- Tmax HyperCloud
- Tmax Jeus
- Tmax Tiberio
- Tmax WebToB

Services

- Lenovo Data & Analytics Services

A subsidiary of Tmax, Korea's leading database and middleware software provider, TmaxData specializes in DBMS and business intelligence solutions. The company partnered with Lenovo to offer Tiberio ZetaData—an all-in-one database appliance that combines Tmax software with Lenovo ThinkSystem SR650 servers, offering customers a plug-and-play solution that delivers high-performance processing and reliable management of their data. Impressed with the performance, reliability, and easy scalability of the Lenovo ThinkSystem servers, TmaxData also selected Lenovo technology as the foundation for its new private cloud offering: HyperCloud.

“The combination of Lenovo ThinkSystem SR650 servers and Tmax software in the ZetaData appliance is a winner. Customers benefit from superior performance and scalability, reliable operations, and lower deployment and running costs.”
