

# Thriving in the cloud world with ever-ready HCI

## Expedient

Cloud services provider Expedient embraced a hyperconverged infrastructure (HCI) solution from Lenovo and Nutanix. Powered by Intel® Xeon® Scalable processors, the new platform offers outstanding reliability and flexibility, helping Expedient guarantee stellar service for clients of all kinds.

### Customer Problem

Facing slow delivery times with its existing hardware provider, Expedient struggled to procure the hardware it needed to underpin critical cloud and data center services.

### Lenovo Solution

Lenovo drew on its strong supply chain to outfit Expedient with a new estate of Lenovo ThinkAgile HX7521 Appliances with Nutanix Cloud Infrastructure – AOS Storage software, rapidly and reliably.

### Business Impact

The company has solved its supply issues and gained a scalable, flexible HCI platform that leverages the built-in accelerators of the Intel® Xeon® Scalable processors to power superior performance for clients' mission-critical workloads.

Powered by up to 4th Gen Intel® Xeon® Scalable processors

“Working with Lenovo has been a breath of fresh air. The team is always open and honest about hardware availability and delivery timelines. Plus, when the Lenovo kit arrives, I know I can count on it to operate reliably.”
