Computer Services

Bringing top-quality IT services to clients across Europe

IBA Group

With Lenovo ThinkSystem servers and all-flash and hybrid storage at the heart of its state-of-the-art data center, IT services provider IBA Group is ready to reach out to all-new growth opportunities.

Who is IBA Group?

1

IBA Group is a leading IT services provider with offices in 15 countries and software development centers in 10 countries, employing over 2,000 people. Headquartered in Prague, Czech Republic, the company offers a range of outsourcing and software services including consulting, development, migration, and 24/7 support.

2

The Challenge

From humble origins as a small software development firm, IBA Group has evolved into a globally recognized IT services provider, with clients in more than 50 countries. As part of this impressive growth trajectory, the company has been focused on strengthening its position across its core service region of Central and Eastern Europe.

In 2005, IBA Group relocated its headquarters to Prague and began expanding its European footprint in earnest. With this move came more customers and more complex operations for the company to manage. To stay on top of it all, IBA Group saw that it needed more robust computing resources. The company made the decision to break ground on a new data center to support internal business systems and development environments, along with a growing portfolio of hosted and customer-facing systems. "We wanted to build a truly state-of-the-art data center to support our continued business expansion. We decided to locate it in the most advanced facility of its kind in Prague, and we aimed to furnish it with the most advanced server and storage technology. For that, we needed a world-class technology partner."

Irina Kiptikova

Corporate Communications Director, IBA Group

Top-notch technology for a new data center

After choosing Lenovo as its strategic hardware provider, IBA Group wasted no time getting its new data center up and running. The company first went into production with high-performance Lenovo ThinkSystem servers and all-NVMe flash storage, and has made multiple extensions to the environment since then to keep up with evergrowing operations.

Today, IBA Group's data center is home to more than 20 Lenovo servers, including ThinkSystem SR650, SR630, and SR550 models. These servers are attached to three Lenovo ThinkSystem DM5100F, DE6600F, and DE2000H storage arrays. On top of this, the company has established a mixed virtualization environment—featuring Red Hat Virtualization, VMware vSphere, and oVirt open-source virtualization—with a total of more than 700 virtual machines (VMs).

Software

Lenovo XClarity Administrator Red Hat Virtualization VMware vSphere Importantly, IBA Group can manage all of its hardware resources with a single tool: Lenovo XClarity Administrator. In addition to providing centralized monitoring of the company's hardware landscape, XClarity Administrator makes it easy to manage firmware updates and compliance, schedule maintenance windows, provision new systems, and check configuration settings.

The new data center hardware also builds on a well-established footprint of Lenovo devices at IBA Group. For years, teams at company locations across Central and Eastern Europe have made use of Lenovo PCs and laptops to support day-to-day operations. Currently, IBA Group has a fleet of more than 450 Lenovo devices, including Lenovo ThinkPad T Series, E Series, and X1 Carbon laptops.

"We wanted the best for our data center and Lenovo absolutely delivered it. We are very pleased with the performance and reliability of our Lenovo ThinkSystem servers and storage. They give us a great foundation for growing our business and supporting new client demands."

With Lenovo technology underpinning its data center operations, IBA Group is ready to race ahead in Europe's IT services market with an ever-expanding array of business services and client workloads.

The company is doing just that with a brand-new hybrid cloud platform called ICDC. First developed as a private cloud for supporting internal development and data center operations, IBA Group now offers the same cloud capabilities to clients through a platform-as-a-service (PaaS) model—adding a valuable revenue stream to its already extensive portfolio.

High-performing servers and storage support an evergrowing array of workloads

Lenovo provides one point of contact and support for both hardware and software

Positions IBA Group for continued growth across key European markets As a business with big growth ambitions, being able to count on Lenovo as a single point of contact for data center hardware, intelligent devices, and supporting software licensing adds immense value for the company. With Lenovo doing the heavy lifting on the hardware, software, and support side, IBA Group is free to focus on building its business and bringing the best to clients across Europe and beyond.

"We have been a loyal Lenovo customer for many years and now we are lucky to have them as a strategic partner too. We appreciate the close relationship we have established with Lenovo. It genuinely feels like we speak the same language and we can always count on Lenovo to be there for us."

Irina Kiptikova Corporate Communications Director, IBA Group

Why Lenovo?

IBA Group has a long history with Lenovo, both as a client and partner. The company achieved certified Lenovo partner status in 2005, and has been using Lenovo PCs and smart devices to support its business operations for even longer.

When the time came to select an infrastructure platform to underpin its new data center operations, IBA Group's choice quickly became clear. After an initial review of available hardware on the market, the company decided to move straight into a proof-of-concept exercise with Lenovo, followed by a full deployment.

As Irina Kiptikova puts it: "In the end, it was an easy choice to make. We have years of experience with Lenovo technology and we have a good relationship with our local team. We knew that we would be in safe hands with Lenovo as our hardware partner."

How do you accommodate more complex and diverse client workloads?

Driving expansion in key European markets, backed by Lenovo technology.
