

Security is critical to the future of work

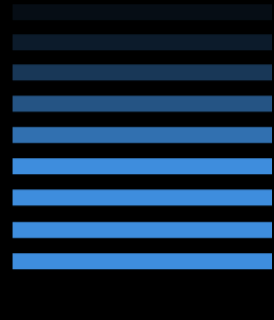

What keeps IT leaders up at night? According to Lenovo's 2021 "The Future of Work and Digital Transformation" report, these are the top concerns.

IT leaders are responsible for securing nearly

4x more remote devices than they were in 2019.¹

Data security

49% of employees had never worked remotely before the pandemic.²

That means employees are at heightened risk for phishing scams and other unsafe online behavior.

AI-powered antivirus protection from **SentinelOne** detects, prevents, and can autonomously roll back from malware attacks.

IT management of security solutions

Company-owned devices are deployed around the world.

Remote manageability features on the built-for-business **Intel vPro® platform** ensure that IT departments never lose contact with employees and their devices.

Employee productivity

Remote employees need easy access to IT support.

Lenovo Commercial Vantage gives users a central portal to manage hardware settings, set preferences, and check system updates.

Persistent endpoint visibility and management from Absolute or Intel® Active Management Technology on the Intel vPro® platform reduce downtime.

Operating costs

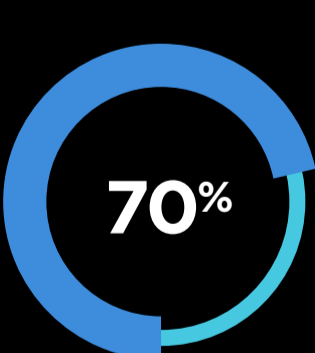

Licensing end-to-end device management with **Lenovo DaaS Managed Absolute** is the most efficient and flexible way to support a remote workforce.

67% of ITDMs in large organizations are extremely interested in moving to a DaaS model.³

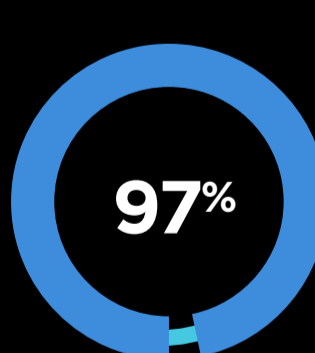

Business continuity

IT leaders are actually making this look effortless.

70% of employees say their company operates as normal in a remote capacity.³

97% of companies are using secure collaboration tools such as Microsoft Teams.

Wide adoption of collaboration software has contributed to an overall positive employee experience with remote work.

Evolve and thrive with ThinkShield security. ThinkShield is Lenovo's security portfolio of hardware, software, services, and processes — fully customizable solutions to secure your critical data and business technology.

Get the most comprehensive protection with a modern Windows 10 Pro device powered by the Intel vPro® platform.
