**Deployment
Assistant**

Deploying end-user devices in the hybrid workplace

Working from anywhere may present new challenges, but managing devices doesn't have to be one. With **Lenovo Deployment Assistant (LDA)**, administrators can easily deploy and manage the whole fleet from a central location.

for all**

Lenovo

Managing remote endpoint devices

Now that the workplace looks different, so too must administrators' strategies for deploying, securing, and managing endpoint devices that may rarely connect to the corporate network.

Part of Lenovo Modern IT solutions, Lenovo Deployment Assistant is a software application that dramatically simplifies administrators' daily routines by allowing them to add content to Microsoft Endpoint Configuration Manager in a simple and automated way.

LDA enables tools for remote updating, providing visibility into hardware health and warranty information, and tracking usage statistics—no matter where employees take their devices.

Comprehensive endpoint and data protection

LDA is available for all Lenovo ThinkPad, ThinkCentre, and ThinkStation devices. LDA incorporates unique features and tools including:

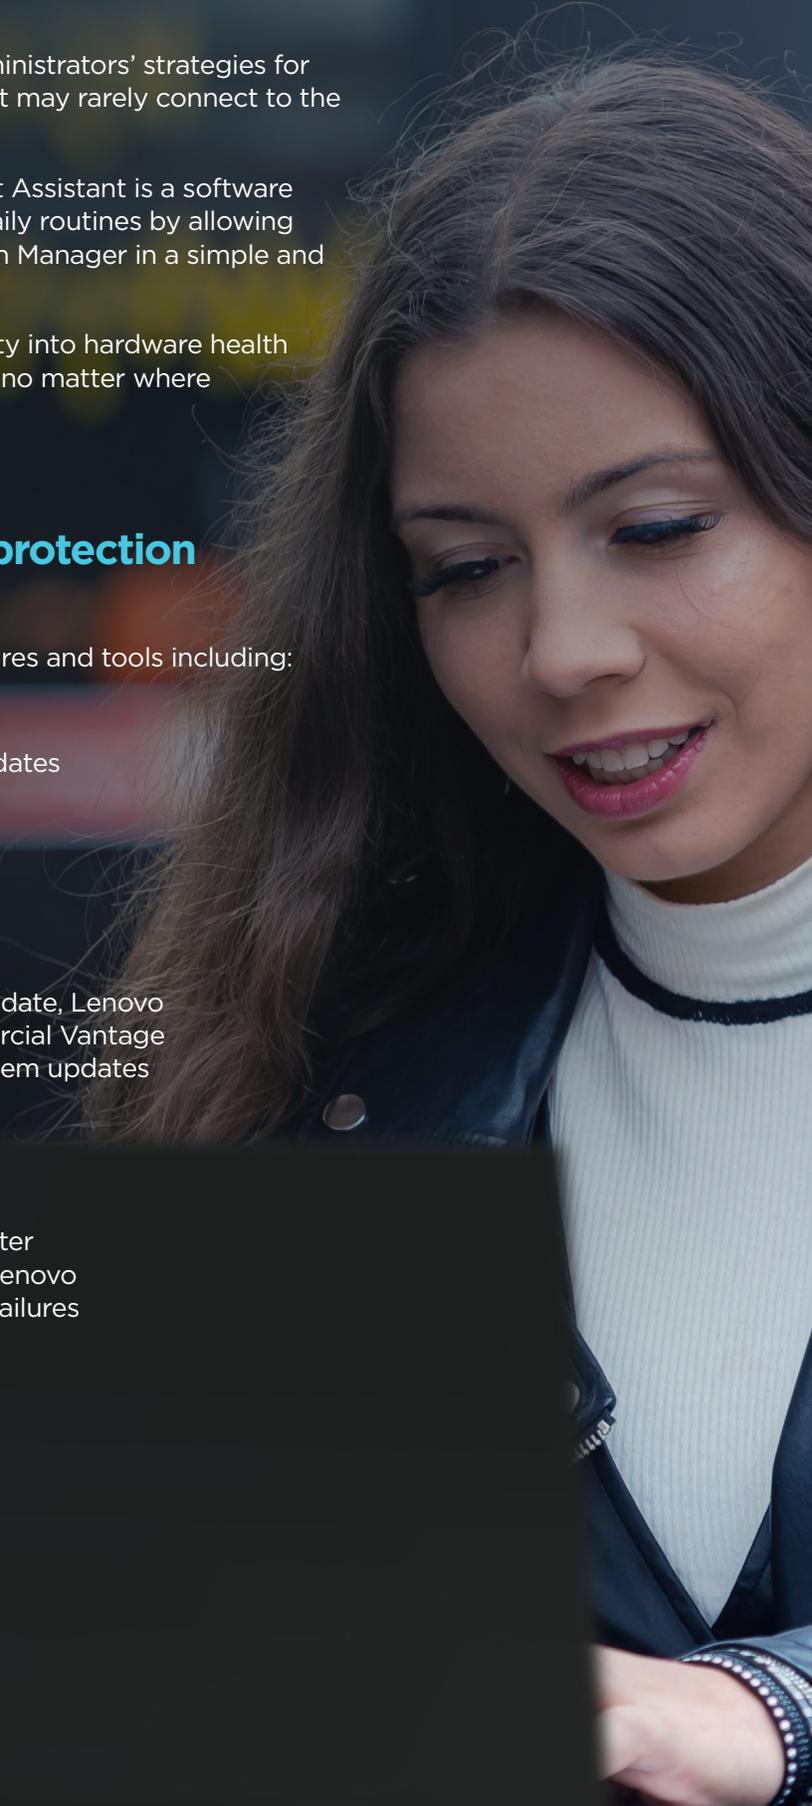

Simplified Deployment: Send updates large-scale with automation tools including Lenovo Dock Manager

Easy Updates: Lenovo System Update, Lenovo Thin Installer, and Lenovo Commercial Vantage automate patching and other system updates

Proactive Monitoring: PC Odometer tracks device wear and tear and Lenovo Diagnostics diagnoses hardware failures

Seamless integration for monitoring devices in the hybrid workplace

Traditionally, administrators completed routine endpoint management tasks in the office, where employee devices routinely connected to the company network for easy IT access. Now, with employees scattered and joining company networks less frequently, administrators need a secure, integrated way to deploy, monitor, and maintain their fleet of Lenovo devices. Lenovo Deployment Assistant utilizes the following features to ease administration challenges of a work-from-anywhere model:

With Lenovo Deployment Assistant, IT teams can:

- Integrate with Microsoft Endpoint Configuration Manager to automate tasks and save time
 - Simplify rolling out system updates to a remote device fleet
 - Monitor health of endpoint devices and diagnose hardware failures from a remote location
 - Easily gather important Lenovo-unique data using Lenovo Inventory Data for Microsoft Endpoint Configuration Manager
- **Lenovo System Update** automates the time-consuming tasks of keeping systems patched through policy and local updates.
 - **Lenovo Thin Installer** is a lightweight version of System Update does not require installation on endpoint devices. Thin Installer installs updates from an IT-controlled repository.
 - **Lenovo Commercial Vantage** is a free app created specifically for IT admins, not users. It provides access to hardware features and enables IT admins to remotely set up personal configuration preference and controls on fleet devices.
 - **Lenovo PC Odometer** tracks usage statistics that indicate the level of wear and tear on devices including uptime, thermal, and shock events. This forewarns administrators of failures on the horizon, giving more time to prepare.
 - **Lenovo Diagnostics** aids in hardware failure analysis. It includes a suite of diagnostic tests (either quick or extended) that diagnose individual hardware components.
 - **Lenovo Dock Manager** improves large scale deployments of firmware updates for Lenovo docking stations by installing the latest firmware for any connected dock.

Smarter endpoint management for the hybrid workplace starts with **Lenovo Deployment Assistant**.
