A SMARTER WAY TO PROTECT USB DEVICES

Lenovo ThinkBook 14 and 15 powered by Intel® Core™ i7 Processors come with the Lenovo Hidden Port that allows employees to tuck away their mouse dongles and nano receivers out of sight, reducing the chances of losing them, while minimizing visibility which protects against theft.

ONE LESS THING TO MANAGE AND WORRY ABOUT

PLUG IT AND FORGET IT
It's easy to lose a tiny mouse dongle. It can get knocked out while moving around or simply fall out. The hidden USB port ensures that the dongle fits all the way in and the built-in cover acts as a second level of protection for the port.

PROTECT YOUR DATA
Another benefit of this hidden USB port is that you can use it for storage, and not worry about it being pulled out easily. A nano USB-drive goes all the way into the slot, without being visible to anyone from the outside.

BALANCE AESTHETICS AND FUNCTIONALITY
Say goodbye to dongles sticking out from the sides of your laptop. With the uniquely designed Hidden USB Port, the lines of the ThinkBook stay clean and uncluttered. Plus, the port is protected from dust for longer life.

IT MATTERS MORE THAN YOU THINK
The Lenovo Hidden Port provides security and convenience for professionals who frequently travel for business with their devices. Sales persons, for instance, often have sensitive data on their systems, and this feature ensures their nano USB-drives are hidden and protected from physical damage in a crowded place like business lounges or cafes.

It enables the modern workforce to stay connected to their work, mouse or a keyboard dongle. It also helps them keep their personal files handy on a nano thumb-drive without having to store them directly on their ThinkBook.
