The technology at the core of your business has never been more important—with remote, hybrid, and at-home work now a permanent part of your world.

61% of U.S. workers are choosing not to go into their workplace.

And while you’re dealing with all these complexities, you’re also trying to support your organization’s sustainability goals. Ultimately, you’re left facing some critical challenges:

You may think the problem lies with how you manage, procure, and secure your devices. Instead, you need to redefine the role technology plays in supporting your employees.

Manage costs

- Avoid hoarding devices or relying on aging, existing equipment
- Choose different outsourcing plans for various hardware solely based on price and not on outcomes

Boost security

- Lock down devices to regain control of security

Provide choice

- Offer a completely open device strategy

The addition of process-heavy, time-consuming steps, security issues, and lack of standardization can lead to stale assets that require costly upkeep, complex multivendor management, technology constraints that limit where, when, and even how you do business, and technology payment structures that restrict how you support the business.

Business requirements that demand 100% uptime and full compliance from underlying technology and services.

And while you’re dealing with all these challenges, you’re also trying to support your organization’s sustainability goals. Ultimately, you’re left facing some critical challenges:

What if you could deliver a user experience that matters to the business?

- Give employees everywhere the support they need.
- Take advantage of flexible payment structures to ensure ongoing support as your organization changes and grows.
- Ensure a consistent and reliable supply of quality devices and the supporting solutions that your employees depend on.
