

LENOVO® ONLINE DATA BACKUP POOLED STORAGE WITH DATA SYNC

As an IT professional, you know the importance of keeping your corporate data safe. However, the critical task of backing up data can be a challenging and expensive endeavor for larger businesses. But backup isn't enough; quick and simple access to that data is also critical.

Lenovo OLDB with Pooled Storage makes backing up and restoring data for desktops and servers an easy process and simple to manage. From the convenience of a single multi-tenant, web-based administrative console, Lenovo OLDB gives you the flexibility to deploy and manage multi-user environments.

Whether you're the CTO of a Fortune 100 company or an IT consultant working with a large company, Lenovo OLDB is a powerful solution for endpoint data backup. Backed by *Mozy by EMC*, OLDB can give you the confidence that your company data is safe, secure, and available. In addition, you will save time and money with OLDB because the enterprise-grade data backup solution doesn't take months to set up, require thousands of dollars of new hardware investment, or force you to hire more administrative overhead.

OLDB not only protects endpoints and remote offices, it works hand in hand with OLDB Sync. With OLDB Sync, users simply place their files in their local Sync folder and they are immediately available from any authorized computer or laptop. File sync allows your workforce to work anywhere by giving them the flexibility to securely access all of their important files in real time—and it's a great way to boost workforce productivity.

SIMPLE	SECURE	SCALABLE

FLEXIBILITY TO ACCOMMODATE THE STRUCTURE OF YOUR ORGANIZATION

Lenovo OLDB Advantage

Simple Storage Management

One pool of storage is maintained at an organizational level. Pooled Storage is assigned, shared, and limited by groups of users.

Centralized Management

The web-based, intuitive administrative console is accessible from anywhere.

Affordable

Keeps costs low with no hardware to purchase and minimal overhead required.

Tools that give you control

The Lenovo OLDB web console enables the IT administrator to:

- Easily manage backup and sync access for thousands of end users
- Create sub-administrators
- View account usage, history and stats
- Generate and email reports automatically
- Reset account passwords
- Automatically add or remove users based on existing LDAP or Active Directory rules and authenticate users using any SAML-enabled SSO solution

OLDB Back up

Lenovo OLDB backs up server-specific applications, including:

- Network shares
- All versions of SQL and Exchange
- SharePoint
- Active Directory
- COM+ services
- SYSVOL
- Hyper-V
- Windows Registry database

Designed with the end-user experience in mind

With Lenovo OLDB, administrators can manage backups centrally or entrust some, or all, of the control to the end user. If empowered, end users can use the Lenovo OLDB client to:

- Sign in using Active Directory credentials
- Select files and folders to back up
- Set up an OLDB Sync folder to keep their active files updated across multiple devices
- Set automatic and scheduled backups
- Configure options and bandwidth throttling
- Enable local backups in addition to online backups

MozyPro servers are located in carefully chosen world-class data centers that are protected by gated perimeter access, 24x7x365 on site staffed security and technicians, electronic card key access, and strategically placed security cameras inside and outside the building.

Lenovo Online Data Backup is part of a comprehensive portfolio of Lenovo's award-winning services that support the entire lifecycle of your PCs. For more information on this, or other service offerings, visit: www.lenovo.com/OLDB/US or call
