

Lenovo SAP HANA Managed Services

Efficient, flexible and cost-effective

Highlights

- Provides maintenance of your SAP HANA system
- Monitors key components of your installation 24x7
- Troubleshoots identified hardware and software issues
- Manages and upgrades your solution for optimized performance and reliability

Managed services address cost pressures

With SAP HANA, you can instantaneously access, explore, model and analyze data in real time without affecting existing applications or systems. But managing and maintaining SAP HANA can strain your resources, infrastructure and budget. Lenovo Enterprise Solution Services offers SAP HANA managed Services on Lenovo System x® hardware to free up your resources and budget for mission-critical activities.

Services value

SAP HANA Managed Services are designed to manage and maintain your solution on System x hardware according to best practices.

Key benefits and features include:

- Maintenance of the system to assure correct installation, configuration and operation of the SAP HANA solution according to best practices and with up-to-date system software and firmware
- 24x7 monitoring of the key components of the SAP HANA solution (Hardware, operating system software and IBM GPFS™)
- Troubleshooting and problem determination for identified SAP HANA hardware and software issues
- Consistent management and upgrade of your HANA solution for optimal performance and system reliability
- Simplified support process with ownership of issue resolution for Lenovo/IBM supported software and hardware

Lenovo SAP HANA Managed Services

Efficient, flexible and cost-effective
