

Support Statement for Lenovo Solutions Utilizing Oracle Linux & Oracle VM

Lenovo had standing relationships with Oracle, but now the System x and ThinkServer suite of solutions can join forces with Oracle in route to market initiatives. Lenovo's servers are listed on the Oracle's HCL as certified on Oracle Linux with the Unbreakable Enterprise Kernel and Oracle VM and Validated Configurations list, ensuring that the customer experience between Lenovo's hardware and Oracle Linux/Oracle VM is enterprise ready. This is an on-going process and servers will continue to be added and qualified. As part of this commitment, Lenovo and Oracle are formally announcing support for solutions featuring a joint infrastructure stack. Lenovo will take on the customer support charter for the hardware, and Oracle will support the software elements. Customers can expect a seamless handoff between the two firms to ensure the utmost level of customer support and satisfaction.

This commitment to service extends from Lenovo's ThinkServer portfolio into the System x server line. With this relationship in place, Lenovo and Oracle look forward to a fruitful partnership that is customer focused, and wholly intended on providing the best end user experience.
