Lenovo

JOIN THE NANO BUSINESS REVOLUTION

Tiny tech. Huge productivity.

A recent Gartner CEO Survey shows that the pressure is on for enterprises to create new business models, drive revenue growth, and engage customers with new services and experiences¹. But the harsh reality is that all this needs to be delivered against a tide of rising rent and energy costs. Enterprise IT teams must deliver the competitive technology now needed in the most cost and space-efficient way.

It's because the modern workplace is shrinking. Not only is there less space, both for people and equipment, but wall-less environments and open seating require increasingly more portable and discreet productivity.

Digital business has made every industry a 24/7/365 operation, so steady uptime can make or break customer trust. And in many settings, such as call centers, density is on the rise, resulting in a growing demand for more power—all while pursuing the containment of total cost of ownership.

The big challenge is big data, and it's getting bigger all the time. Applications and data-rich content are unlocking new levels of productivity and competitive advantage, but they call for heavy processing power and ultra-reliability. On top of all that, they have to run on platforms with security designed into the core.

Enter the ThinkCentre M90n Nano, the world's smallest commercial PC², designed to power business success in any industry.

**It may look black and red,
but it's really green.**

Meet your energy efficiency goals without sacrificing your competitive advantage. The Nano operates on just 65W, consuming 30% less power annually³. That translates into huge operational savings.

Intel® Core™ i7 vPro® processor

The best devices in the world run Windows 10 Pro.

The desktop that doesn't have to be desktop.

Lenovo has engineered the ThinkCentre M90n Nano for exceptional responsiveness, speed, and efficiency, delivered in a smaller footprint than any other commercial PC on the market. With robust security features, flexible connectivity, and built-in reliability, the Nano gives businesses the performance and productivity they need while taking up minimum space.

When space is limited and performance paramount, this compact powerhouse keeps everyone confidently productive with up to 8th Generation Intel® Core™ vPro™ i7 Processors and SSD storage. Powered by Windows 10 Pro, this micro-PC handles heavy files without hesitation, and its 16GB DDR4 memory enables seamless multitasking.

The right technology for better business

ThinkCentre Nano meets every requirement for a modern business PC, with performance, security and flexibility to fit in any business environment and for any job role, from front desk, HR and administration to creative and sales teams.

At one-third the size of the ThinkCentre Tiny, tight workspaces are no problem for the Nano, especially when it is combined with the Tiny-in-One ecosystem, VESA mount or a DIN rail. The Nano can be tucked away behind the monitor with a monitor clamp and can fit anywhere with a VESA mount support.

The one-cable connection provided by the USB Type-C ports also gives users clutter-free space, making room for better productivity and collaboration. It offers connectivity to ThinkPad USB-C dock via a full-function USB-C port, enabling business users to multitask on multiple-monitor set ups.

As well as the Nano, Lenovo offers a full range of ThinkCentre desktop PCs designed for the world of business, with the reliability, performance and security you need.

Ready to explore the world's smallest commercial desktop PC²? Meet ThinkCentre M90n Nano.
