# JOIN THE NANO REVOLUTION IN FINANCE

Performance fit for the financial future.

High-octane financial services markets demand high performance tech solutions. In the words of a recent PWC research paper: “It is now becoming obvious that the accelerating pace of technological change is the most creative force – and also, the most destructive one – in the financial services ecosystem today.”<sup>1</sup>

Regulation, the rise of fintechs and the seismic shift of consumer expectations have put the financial sector on the front line of digital transformation. The key challenges around maintaining a competitive advantage and finding new efficiencies are balanced by the exciting opportunities for growth and profit made possible by new technologies.

Yet business environments are shrinking and evolving. There is less room for people and equipment and density is on the rise, while finance and banking professionals are using processor-hungry applications and working with data-heavy digital financial content. At the same time, cost of ownership is always a critical concern, making power consumption a key metric. And in the always-on, time-critical financial world, strong security and tough, ultra-reliable performance are essential.

Your trading and client service teams need the power to compute huge streaming data sets in near real-time with devices that deliver bullet-proof security and reliability. They also need clean, unobstructed desk spaces rich in high-tech connectivity – and the freedom to work flexibly with user-friendly, eco-friendly tech.

Enter the ThinkCentre M90n Nano, the world's smallest commercial PC<sup>2</sup>, designed to power business success in any industry.

It may look black and red,  
but it's really green.

Meet your energy efficiency goals without sacrificing your competitive advantage. The Nano operates on just 65W, consuming 30% less power annually<sup>3</sup>. That translates into huge operational savings.

Intel® Core™ i7 vPro® processor

The best devices in the world run Windows 10 Pro.

## The desktop that doesn't have to be desktop.

Lenovo has engineered ThinkCentre M90n Nano for exceptional responsiveness, speed, and efficiency, delivered in a smaller footprint than any other commercial PC on the market. With robust security features, flexible connectivity, and built-in reliability, the Nano gives traders, back office staff, customer-facing teams and administrators the performance they need, while taking up minimum space.

### The right technology for better finance

The ultra-compact form factor of the Nano allows connection to multiple displays and peripherals through a wide range of ports. It offers connectivity to ThinkPad USB-C dock via a full-function USB-C port, enabling financial analysts to multitask on multiple-monitor set-ups. This kind of versatility makes the Nano ideal for the financial sector, where switching rapidly between applications and screens can make the difference between profit and loss.

When space is limited and performance paramount, this compact powerhouse keeps everyone confidently productive with up to 8th Generation Intel® Core™ vPro™ i7 Processors and SSD storage. Powered by Windows 10 Pro, this micro-PC handles heavy files without hesitation, and its 16GB DDR4 memory enables seamless multitasking.

The Nano also has ThinkShield end-to-end customisable security built in, protecting sensitive data – yours and your clients – from every angle.

At one-third the size of the ThinkCentre Tiny, tight workspaces are no problem for the Nano, especially when it is combined with the Tiny-in-One ecosystem, VESA mount or a DIN rail. The Nano can be tucked away behind the monitor with a monitor clamp and can fit anywhere with a VESA mount support. The one-cable connection provided by the USB Type-C ports also gives users clutter-free space, making room for better productivity and collaboration.

As well as the Nano, Lenovo offers a full range of ThinkCentre desktop PCs designed for the world of finance, with the reliability, performance and security you need.

Ready to explore the world's smallest commercial desktop PC<sup>2</sup>? Meet ThinkCentre M90n Nano.
