1.0 Overview

Lenovo is a global company that is incorporated and headquartered in Hong Kong with operational centers located around the world. We have about 55,000 employees serving customers in more than 160 countries.

Lenovo is devoted to conduct socially, environmentally and ethically responsible sourcing and business practices with our products, employees, sites, and suppliers. A full overview of Lenovo including our products, culture, and management can be found on www.lenovo.com.

This Conflict Minerals Report of Lenovo Group Limited (Lenovo) for calendar year **2017** is in accordance with Rule 13p-1 under the Securities Exchange Act of 1934 ("Rule 13p-1"). This ruling is also known as Dodd-Frank or SEC 1502.

Lenovo has utilized the Organization for the Economic Cooperation and Development (OECD) Guidance for conflict minerals and the Responsible Business Alliance (RBA) programs to conduct our responsible supply chain sourcing efforts for Reasonable Country of Origin Inquiry (RCOI) and Due Diligence (DD) efforts. The programs are internationally recognized and industry standard practices and act as the design framework of our conflict mineral program.

This conflict mineral report does not attempt to explain the all elements of the OECD guidance or the RBA programs, but the information may be obtained from the following links:

- <http://www.oecd.org/corporate/mne/mining.htm>
- www.responsiblebusiness.org

Our Specialized Disclosure was signed by our Director of Environmental, Sustainability & Compliance.

CONFLICT MINERALS REPORT OF LENOVO GROUP LIMITED

IN ACCORD WITH RULE 13P-1 UNDER THE SECURITIES EXCHANGE ACT OF 1934

2.0 Definition / Glossary

Definition

Conflict minerals are defined as raw mineral sources of Tin, Tantalum, Tungsten and Gold that maybe financing conflict in the Democratic Republic of the Congo or an adjoining country. They are frequently referred to as 3TG.

Glossary

- CMRT – Conflict Minerals Reporting Template
- CC – Covered Countries (also known as the adjoining countries of the DRC)
- DD – Due Diligence (Verify / Check)
- DRC – Democratic Republic of the Congo
- OECD – Organization for the Economic Cooperation and Development (www.oecd.org)
- RBA – Responsible Business Alliance (www.responsiblebusiness.org)
- RCOI – Responsible Country of Origin Inquiry (Survey / Ask)
- RMAP – Responsible Minerals Assurance Process (RMAP)
- RMI – Responsible Minerals Initiative (www.responsiblemineralsinitiative.org)
- SET – Smelter Engagement Team
- SOR – Smelter or Refiner
- 3TG – Tin, Tantalum, Tungsten & Gold

3.0 Reasonable Country of Origin Inquiry (RCOI)

It is a common industry practice for most companies with electronic products/components to utilize conflict minerals for the necessary functionality or production of such products. As such, conflict minerals are in all our hardware products and a listing of specific products would be redundant.

Lenovo conducted a Reasonable Country of Origin inquiry (RCOI) to determine if conflict minerals did originate in the Democratic Republic of the Congo (DRC) or the Covered Countries (CC). We used the Responsible Business Alliance (RBA) Responsible Minerals Initiative (RMI) program for RCOI by using the Conflict Minerals Reporting Template (CMRT), which is widely used by industry. We also required our suppliers to use the CMRT's with their supplier bases.

In our RCOI, we surveyed 95% of our suppliers by spending amounts and achieved a 100% response rate. Responses were checked for completeness, consistency and issues. Supplier conflict mineral policies were directly validated. Incomplete CMRT's or those with other issues were returned for corrective action (i.e. policy link invalid). Reported countries of origin are identified in Section 10.0 of this report.

4.0 Conflict-Free Disclosure

Based on the RCOI and good faith efforts, Lenovo did have reason to believe that the conflict minerals had originated in the DRC or the CC. Therefore we conducted Due Diligence (DD) on the source and custody of conflict minerals in our products and created this Conflict Minerals Report (CMR) with the required elements. Furthermore based on due diligence described further in this report, Lenovo has not yet fully determined that the conflict minerals have not financed or benefited armed groups in the region.

However we did achieve 100% conflict-free with the reported and verified Tantalum smelters. Furthermore, we estimated that our supply chain is 83% conflict-free with all our products and another 5% formally active to be audited and certified.

CONFLICT MINERALS REPORT OF LENOVO GROUP LIMITED

IN ACCORD WITH RULE 13P-1 UNDER THE SECURITIES EXCHANGE ACT OF 1934

Lenovo did not focus only on “product specific” supplier CMRT’s as to reduce the working number of smelters and improve our numbers. We believed it was more socially responsible to report all SOR in our supply chain, whether they actually provide content in our products or not, to further conduct DD as required.

5.0 OECD Due Diligence Standard Implementation

Lenovo adopts the OECD guidance entitled, “OECD Due Diligence Guidance for Responsible Supply Chains for Minerals from Conflict-Affected and High-Risk Areas”.

The guidance and associated requirements recognizes our position in the overall supply chain where Lenovo sells technology products and services to end-users where we act as a final “downstream” retailer. For a significant portion of the parts we purchased, Lenovo had no direct influence on the parts, ingredients or components in them. Most were industry standard product where we only specified or negotiated contractual terms with a manufacturer that did not relate to the manufacturing of the product (e.g. price and legal terms). For example, we did not direct the CPU, Storage, Memory, Planar, Battery and other electronic suppliers how to design, source and manufacture their components.

More specifically, Lenovo did not purchase raw or refined ore, and we did no direct purchasing in the DRC or CC. We did not have any direct visibility to the further “upstream” mines of origin, the buyers/sellers/consolidators/intermediaries, the transit routes, nor to the “mid-stream” Smelter’s or Refiners (SOR). Lenovo was in fact not only numerous supply chain tiers away from the mines of origin, but we were many tiers removed from SOR as well.

Therefore Lenovo by far is not a manufacturer or nor conducts “contract to manufacture” per the Dodd-Frank definition, and we were a final assembly/test operation and our suppliers acted more as retailers.

Consequently there were specific and complex challenges in terms of data accuracy, coverage, vintage, confidentiality, scope of data, languages/communications/translations as well as lack of any direct business relationships to gain direct transparency on the supply chain. As a result, the origin of conflict minerals cannot be determined from Lenovo’s position in the supply chain, with any certainty once the raw ores are smelted, refined and converted to ingots, bullion or other conflict mineral derivatives.

The OECD Due Diligence Guidance clearly recognizes this complexity and further states:

- “The Guidance recommends that downstream companies identify, to the best of their efforts, and review the due diligence process of the smelters/refiners in their supply chain and assess whether they adhere to due diligence measures put forward in this Guidance. Downstream companies may participate in industry-wide schemes that assess smelters/refiners’ compliance with this Guidance and may draw on the information these schemes provide to help them fulfill the recommendations in this Guidance.

This distinction reflects the fact that internal control mechanisms based on tracing minerals in a company’s possession are generally unfeasible after smelting, with refined metals entering the consumer market as small parts of various components in end-products. By virtue of these practical difficulties, downstream companies should establish internal controls over their immediate suppliers and may coordinate efforts through industry-wide initiatives to build leverage over sub-suppliers, overcome practical challenges and effectively discharge the due diligence recommendations contained in this Guidance.”

CONFLICT MINERALS REPORT OF LENOVO GROUP LIMITED

IN ACCORD WITH RULE 13P-1 UNDER THE SECURITIES EXCHANGE ACT OF 1934

As a result of our supply chain position and recognizing the complexities allowed by OECD guidance, Lenovo conducted RCOI to trace to SOR, and we focused our efforts on identification, audits and certification of SOR to be conflict-free compliant. Upon identification of relevant SORs, Lenovo used the following RBA RMI programs efforts for smelter audits and certification:

- Responsible Minerals Assurance Process (RMAP) to help conduct DD and to establish business processes and protocols for SOR auditing and certification. Additionally this program provided country of origin information identified from actual audits.
- Smelter Engagement Team (SET) workgroup efforts to verify smelters as legitimate, to conduct outreach to drive them for certification and to track the status of all smelters/refiners.
- 3TG Industry Program Alliances: Leveraging other industry organization efforts on conflict-minerals which provide additional RCOI and DD information. The organizations included the London Bullion Market Association (LBMA), the Responsible Jewelers Council (RJC, and the Tungsten Industry – Conflict Minerals Council (TI-CMC).

6.0 OECD Measures Taken

Following are the measures taken by Lenovo to comply with OECD, Dodd-Frank and RBA to prevent the use of conflict free minerals contributing to conflict.

6.1 Establish Strong Management Systems

- We have created a formal and public Conflict Minerals Policy which may be found at:
 - ✓ www3.lenovo.com/us/en/social_responsibility/Conflict_minerals_statement.pdf
- Lenovo had a formal organization structure for Sustainability and Conflict Minerals. There was a Chief Sustainability Officer, a Director of Environmental, Sustainability & Compliance, Global Operations program team and Procurement teams for execution of conflict minerals programs, actions and reporting.
- We established within Lenovo a system of transparency and controls over the supply chain that allowed the identification of SOR of conflict minerals. First, we executed the RBA RMI programs for RCOI to identify the SOR. Second, we maintained all records on a computerized database. Third, through the use of the RBA reporting web application (RBA On-line), we had an electronic information sharing application with suppliers.
- We have taken several measures to establish and to continue to enhance our supplier engagement.
 - ✓ We have long-term relationships with most of our suppliers to build leverage and compliance. Much of our procurement spending is with a small supplier base and as such transitions are costly. We had a Lenovo Supplier Advisory Council of our Top 20 suppliers who met with our senior executives semi-annually.
 - ✓ We established our expectations via formal communications, supplier RBA Agreements and our Lenovo policy. We established a new and comprehensive Supplier Code of Conduct and stipulated it in our contracts.

CONFLICT MINERALS REPORT OF LENOVO GROUP LIMITED

IN ACCORD WITH RULE 13P-1 UNDER THE SECURITIES EXCHANGE ACT OF 1934

- ✓ We directly validated supplier compliance with the RBA Code of Conduct, which includes conflict minerals DD efforts (Ethics #7). This included formal annual supplier Self-Assessments and biennial Supplier Audits of the code with RBA approved third party auditors and reporting with RBA on-line tools (i.e. RBA On-Line). Corrective Action Plans were received for all audits and action closure status was reported monthly.
- ✓ During 2017, we invested in additional personnel resource driving our DD efforts and developed new tracking tools to better identify frequency of non-compliant SOR usage across our supplier base.
- For company or industry grievances, Lenovo has several company mechanisms. Internally we have several corporate policies (e.g. Reporting Unlawful or Inappropriate Conduct, Environmental Affairs, Human Rights, etc.) as well as a formal employee Code of Conduct covering 33 specific areas of focus and where to go for help. Externally we have a [Human Rights Policy](#). For industry or external grievance, we also have a contact identified in our conflict minerals policy and asked concerned parties to contact "**environment@lenovo.com**."

6.2 Identify & Assess Risk

Since there are many complex risks in ensuring a conflict-free supply chain, and the OECD Due Diligence guidance recognizes the difficulty of downstream companies to identify upstream actors, Lenovo's goal was to identify the SOR in our supplier chain using standard industry wide schemes as to whether the conflict minerals came from the DRC or adjoining countries.

The key resulting risks were then:

- Were the SOR actually located in the DRC or the surrounding countries?
- Had the SOR procured ore from those locations?
- Was any information provided by SOR and multiple tiers of the supply chain sufficiently precise?
- Would basic engagement with smelters/refiners (e.g. email, telephone, internet investigation, site visits) be sufficient to provide adequate confidence of not contributing to conflict?
- Given the worldwide nature of supply chains, could the risk could be present with most SOR matter where they are located?
- Even though an SOR was reported in our supply chain, were we certain the minerals processes were actually in our products?

6.3 Design/Implement Response Strategy

Therefore Lenovo's strategic objective to sufficiently respond to and to mitigate the risk was to understand all the SOR in our supply chain, whether they were actually in our supply chain or not and either get them certified or to ultimately discontinue usage of them. The initiatives designed to drive towards that objective were as follows:

Lenovo's strategy to respond to the risks was as follows:

- Smelter/Refiner Certification
 - ✓ We continued the use of RMAP programs so that only conflict-free compliant smelters are used and leveraged the Smelter Engagement Team (SET) workgroup efforts on non-compliant and non-active SOR.

CONFLICT MINERALS REPORT OF LENOVO GROUP LIMITED

IN ACCORD WITH RULE 13P-1 UNDER THE SECURITIES EXCHANGE ACT OF 1934

- Smelter / Refiner Discontinuation
 - ✓ Since hundreds of companies and many RBA/RMI members share many of the same SOR, our strategy is to use our collective power to drive positive changes. In the event those efforts are not successful, Lenovo will participate in joint efforts to discontinue use of those smelters who refuse to be audited and certified.
 - ✓ It is important to note that there are distinct challenges to actual and verified removals of SOR from supply chains. Demanding suppliers to remove non-compliant SOR (“negative efforts”) provides low confidence that a smelter is actually removed from a supply chain and the removal stays effectuated. Lenovo recognizes positive efforts are better in the long-run for all involved parties.
- Internal Reporting & Awareness
 - ✓ Monthly Metrics: Reporting of annual CMRT survey status of kickoff and completion
 - ✓ Newsletters: Monthly key news, events, concerns and key links
 - ✓ Education: Semi-Annual education sessions for all employees
 - ✓ Program Status: Bi-Monthly program status and latest events
- External Reporting
 - ✓ Public Conflict Minerals Policy and Conflict Minerals Report.
 - ✓ Program information was provided externally and will continue to be provided publicly in our Corporate Sustainability Report, Corporate Annual Report and Supply Chain Sustainability Resources on our webpages.
 - ✓ We also provided and will provide our due diligence measures to Customers and external stakeholders upon request.
 - ✓ Maintain our public policy on Conflict Minerals.
- OECD Due Diligence Guidance
 - ✓ Lenovo will continue to actively promote the observance of the guidance, take measures to integrate the 5-step framework into our management systems and to ensure the widest possible dissemination of the guidance.

Lenovo did not discriminate or limit action to only SOR that we believed were only in our products to improve our reported statistics. We took action on all reported SORs in our supply-chain whether their materials were truly in our products or not. We believed it was more socially responsible to report all SOR in our supply chain, regardless if they actually provided content in our products or not, to further conduct DD as required.

6.4 Carry Out Independent 3rd Party Audits

As noted above, Lenovo will use the RMAP and the SET drive audits of smelter/refiners. Please see section 8.0 for the status of SOR supply chain and section 10.0 for the list of the actual SOR.

6.5 Report Publicly on Due Diligence

As noted above, Lenovo publishes publicly our due diligence policies and practices efforts. This reporting and all of Lenovo’s other sustainability efforts are available at: [Lenovo Social Responsibility Resources](#).

7.0 Additional Measures to be Taken

CONFLICT MINERALS REPORT OF LENOVO GROUP LIMITED

IN ACCORD WITH RULE 13P-1 UNDER THE SECURITIES EXCHANGE ACT OF 1934

Lenovo will take further steps in calendar year 2018 to improve our efforts and to continue our results. We have a goal of improving our overall conflict-free posture to 90% by end of CY2018.

First, we will increase positive outreach to non-compliant / non-active SOR to assist, educate and motivate them to become active and certified. Second, we will conduct more directive engagement with our suppliers who have non-compliant SOR. In particular, we will work more closely with our primary joint venture outsourcing manufacturer and their suppliers and smelters. Finally, we will commence DD efforts on Cobalt. Progress on these efforts will be publicly reported in our Sustainability Report.

8.0 Smelter and Refiner Key Indicators

From Lenovo's RCOI and DD efforts we have identified most of the SOR in our supply chain and determined how many are conflict-free compliant. The below table indicates our overall progress trend and CY2017 performance.

Lenovo Status	2013	2014	2015	2016	2017
% Conflict Free	37%	50%	75%	80%	82%

Conflict Mineral	Total SOR	Compliant	Active	Out-Reach In-Comms	% Compliant
Ta - Tantalum	39	39	0	0	100%
S - Tin	78	68	2	5	87%
W - Tungsten	46	41	2	1	89%
Au - Gold	139	100	6	17	72%
Overall	302	248	11	41	82%

Our progress in 2017 was limited due to two causes. First, we on-boarded several new suppliers who did not have robust conflict mineral DD programs. Second, several previously compliant SORs became non-conformant during the year.

Other Key Statistics

- Approximately 75% of our suppliers by spending were RBA / RMI members
- We generally cover about 95% of our procurement spend in our RBA programs where suppliers DD programs are validated by independent 3rd party audits. This supplier base consists of Tier 1, Tier 2 and Tier 3 suppliers where we had direct procurement relationships. Some of these suppliers acted in multiple tiers. For example, a supplier may provide components to an outsourced manufacturer as well as directly to Lenovo for in-house manufacturing. About 60% of our procurement spend acted in a Tier 2 role but may have acted in a Tier 1 role as well. About 30% of our procurement spend acted in a Tier 3 role. Simply put our conflict mineral DD efforts are executed deeper into our supply chain than Tier 1.
- Approximately 80% of our suppliers by spending have formal sustainability reports and are using the Global Reporting Initiative (GRI) reporting framework
- Less than half our suppliers are legally required to comply with Dodd-Frank

CONFLICT MINERALS REPORT OF LENOVO GROUP LIMITED

IN ACCORD WITH RULE 13P-1 UNDER THE SECURITIES EXCHANGE ACT OF 1934

- Supplier CMRT Response Rate: 100%
- >95% of our suppliers use the CMRT with their suppliers, require them to be conflict-free and request SOR names
- # of Suppliers with Non-Compliant / Non-Active SOR: 24
- # of Non-Compliant / Non-Active SOR: 44
- Reporting: Bi-Monthly status reports were provided to the procurement teams.
- Education: All pertinent personnel educated semi-annually
- Newsletters: Updates were provided monthly as part of our standard RBA Code of Conduct Reporting

9.0 Independent Private Sector Audit (IPSA)

The objective of the IPSA is to express an opinion or conclusion as to whether the:

- *Design* of the issuer's due diligence framework is in conformity with, in all material respects, the criteria set forth in the nationally or internationally recognized due diligence framework used by the issuer, and
- *Description* of the due diligence measures it performed is consistent with the due diligence process that the issuer undertook and actually performed the work described.

Lenovo designed and implemented our overall conflict minerals procedures based on, and in conformity with the five step framework of OECD. However the design of our due diligence process materially conforms to Steps 3 and 4 of the OECD Guidance applicable to a "downstream" company with little to no direct influence on smelters/refiners.

Lenovo did not conduct an IPSA because we did not achieve a conflict-free determination, and IPSA's are not required until then. However we have evidenced our design and description with the content of this conflict minerals report.

10.0 Country of Origin and the Smelter and Refiner Lists

10.1 Country of Origin

Dodd-Frank requires issuers to provide their efforts to determine the mine or location of conflict minerals and to provide the mines or locations as they are identified. However, Dodd-Frank also does recognize OECD requirements which allow then for the valid limitations of down-stream companies to identify the locations of mines. Therefore our efforts to determine the mine of origin were:

- Identification of SOR and their locations via CMRT's from our supply chain
- Names and locations of Mines provided by the CMRT
- Verification of legitimate SOR provided by the RMI including associated and recognize industry bodies (e.g. LBMA, RJC, TI-CMC)
- Audits / Certification of the SOR with the RMAP which provided on a limited basis the origins of minerals and only via a categorization method

CONFLICT MINERALS REPORT OF LENOVO GROUP LIMITED

IN ACCORD WITH RULE 13P-1 UNDER THE SECURITIES EXCHANGE ACT OF 1934

- ✓ L1 – Countries not identified as conflict regions or plausible areas of smuggling or export from these regions of 3TG
- ✓ L2 – Countries known or plausible for smuggling or export out of the region or transit of 3TG
- ✓ L3 – DRC or adjoining countries (Covered Countries)
- ✓ DRC – Democratic Republic of the Congo

While the CMRTs do provide some indication of mine origin countries, the information is not comprehensive. Also the information is not validated. Therefore we did not have precise data on specific mine origin countries. However, from the due diligence and RMAP audit of smelters, we do know the following about the 299 SOR reported in our supply chain.

- 28 of the SOR did conduct sourcing of minerals in the DRC and Adjoining Countries
- 22 of the SOR did conduct sourcing of minerals in the DRC
- However, all of these SOR have been audited as conflict-free compliant.

10.2 Smelter and Refiner List ("The List")

Following is the List of SOR identified in our supply chains.

It is important to note that some of the listed SOR content may not actually be in Lenovo products. However, it is our intent, whether the SOR content is in our products or not, is to drive towards a precise list of SOR and require them to be validated as conflict-free compliant via the RMAP.

The List, including, without limitation, all information provided therein, is provided for informational purposes only and is current as of the date set forth therein. Any inaccuracy or omission in the list is not the responsibility of the Lenovo as it is generally well recognized attaining a precise list is a complex and dynamic process. Determination of whether and/or how to use all or any portion of the list is to be made in the user's sole and absolute discretion and responsibility.

Lenovo does not make any representations or warranties with respect to the List. The list is provided on an "AS IS" and on an "AS AVAILABLE" basis. Lenovo hereby disclaims all warranties of any nature, express, implied or otherwise, or arising from trade or custom, including, without limitation, any implied warranties of merchantability, non-infringement, quality, title, fitness for a particular purpose, completeness or accuracy.

To the fullest extent permitted by applicable laws, Lenovo renounces any liability for any losses, expenses or damages of any nature, including, without limitation, special, incidental, punitive, direct, indirect or consequential damages or lost income or profits, resulting from or arising out of the User's use of the list, whether arising in tort, contract, statute, or otherwise, even if shown that they were advised of the possibility of such damages.

In consideration for access and use of the list, THE USER, hereby agrees to release and forever discharge Lenovo, as well as their respective officers, directors, agents, employees, volunteers, representatives, contractors, successors, and assignees, from any and all claims, actions, losses, suits, damages, judgments, levies, and executions, which the user has ever had, has, or ever can, shall, or may have or claim to have against Lenovo arising out of the list or use thereof.

If any part of any provision of these terms and conditions shall be invalid or unenforceable under applicable law, said part shall be deemed ineffective to the extent of such invalidity or unenforceability

CONFLICT MINERALS REPORT OF LENOVO GROUP LIMITED

IN ACCORD WITH RULE 13P-1 UNDER THE SECURITIES EXCHANGE ACT OF 1934

only, without in any way affecting the remaining parts of said provision or the remaining provisions of these terms and conditions.

By accessing and using the List, and in consideration thereof, the user agrees to the foregoing.
